INTRODUCTION.

The present Volume of the *Catalogue Général* contains drawings and descriptions of all the scarab-shaped seals, and scarabs bearing historical inscriptions, in the Museum; the amuletic and heart scarabs will be described in the volumes on amulets by Dr. Reisner.

The collection, numbering over 1500 specimens, is a representative one, and contains examples of all periods from the end of the Sixth Dynasty to the time of the last native Egyptian ruler, Nectanebo. In Twelfth Dynasty specimens it is especially rich, those from Dahchour being the finest examples of the period to be found in any museum in the world.

The collection was begun by M. Mariette in 1858, and it appears to have been much richer formerly than at present. A number of interesting specimens, described in the *Journal d'entrée du musée* and in Mariette's *Monuments Divers*, are not to be found now. Writing in 1889, Professor Flinders Petrie says that "the Scarabs [figured] in the *Monuments Divers* were all in the Boulak Museum, but most were stolen in 1878[1] . . . . I hear that they were mainly sold to General Cesnola for New York."[2] Some examples fortunately have been recovered by purchase (Nos. 36054, 36061, 36067, &c.), a few stray ones can be traced in private hands, but the greater number of those stolen have disappeared.

In describing the specimens I have carefully noted the length, width and height, and given a description of the inscription or device on the base,

[1] Professor Maspero tells me that, on account of the great inundation of 1878, the smaller monuments were packed up in boxes. There were three cases containing scarabs, and of these one box, containing nearly all the historical series, was stolen.

[2] Petrie, *Historical Scarabs*, p. 14.

together with remarks on the glaze, technique and preservation. The material is always noted, and the date, wherever it has been possible to fix it from a study of dated examples in other museums, has been given. Each specimen has been drawn and is figured in the plates. I also made drawings of the backs, and then sorted them into a series of six principal types, specimens of which will be found on Plates XIX–XXII. The types are :—

(1) Scarabs without prothorax or elytra marked. (Plate XIX.)
(2) Scarabs with prothorax slightly indicated but no elytra marked. (Plates XIX, XX.)
(3) Scarabs with prothorax marked but no elytra shown. (Plate XX.)
(4) Scarabs with prothorax and elytra marked. (Plate XXI.)
(5) Scarabs with rounded prothorax and elytra marked. (Plate XXI.)
(6) Scarabs with prothorax and elytra marked, with a V-shaped marking on either wing-case. (Plate XXII.)
(7) Miscellaneous examples. (Plate XX.)

Only about a dozen specimens had numbers attached to them when I began their study, but the *Journal d'entrée du musée* has been carefully searched and a number have been identified ; these references to the *Journal d'entrée* and other publications have always been given. It was not possible to identify them all, for entries such as "Nos. 5453–5733 Gurneh, Juin, 1859, 280 scarabées avec légendes diverses," or "Collection de 51 scarabées (pas royaux)," are frequent.
